

## All you need to do for the first day of math class

I know that there seem to be a lot of instructions involved in how to do this class. However, once you get started, it should go smoothly. To prepare for the first day of class, here's all you need to do:

- Parent: Purchase books and DIVE download.
- Student: Watch DIVE of first one or two lessons (if first class is live). This was explained in the previous step.
- Student: Attempt practice problems from first lesson(s)
- Parent: No need to grade practice problems (ever).
- If first class is "in the flesh", then simply show up and you're done.
- Parent/student: Download and install Zoom
- If the first class is online live, then
  - Student: Watch for email just before first class begins. Click on the link to begin the class.
  - Use a headset if you can.
- If the first class is online recorded, then
  - Navigate to HW assignment page and click on the Recording folder. A web page should come up
  - Find the first lesson and click on it.

The information I sent out may seem overwhelming, but once the class starts, it should go smoothly. Please email or call if you have any questions.
